Transportation Products Quick Guide

The broad and deep Molex transportation interconnect portfolio provides a comprehensive suite of solutions designed to support the evolving mobility ecosystem, from traditional powertrain systems to next-generation electrified and autonomous vehicles. Organized across key application areas – including electrification, ADAS, in-vehicle experience, miniaturization and powertrain – the expansive product offering showcases Molex power, signal and data connectivity technologies that enable reliable power distribution, high-speed data transmission, space-saving designs and enhanced system performance across the entire vehicle architecture.
