| Detection Area                    | Horizontal | 62°(±31°)                    |                                                                                                                                                                                                                           |
|                                   | Vertical   | 62°(±31°)                    |                                                                                                                                                                                                                           |
| Detection zones                   |            | 128                          |                                                                                                                                                                                                                           |

Note 1:The detection range is depending on the target's speed and its temperature difference with the surroundings, detection can occur at a range superior to the value above.

Therefore, before using, please confirm the detection characteristics under the usage environment.

Note 2:The internal circuit threshold of the EKMC16 series corresponds to output offset voltage(Vos)±0.22V.

The threshold of the EKMC46 series corresponds to half of this.

4-4 Timing Chart

## 【Durations】

$T_{wu}$ : Circuit Stability Time = 30s. (max.)

During this stage, the output's status is undefined (ON/OFF) and detection is therefore not guaranteed.

## 4-5 Wiring Diagram

## 4-6 Mounting Directions

## 1) Direction

As detailed on the diagram, please install the sensor so that the expected trespassing direction corresponds to the axis X or axis Y.

In some cases, going back and forth towards the sensor (parallel movement to the axis Z), may not be detected.

## 2) Detection Area

As shown on the diagram, the detection zone is polarized. If a target enters the detection zones + and - at the same time, the signals are respectively cancelled and detection could become impossible at maximum detection range. (Please refer to the detection area diagram in 4-5 for details)

## 5. Safety Precautions

Head the following precautions to prevent injury or accidents.

- 1) Do not use these sensors under any circumstance in which the range of their ratings, environment conditions or other specifications are exceeded.  
Using the sensors in any way which causes their specifications to be exceeded may generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry and possibly causing an accident.
- 2) Our company is committed to making products of the highest quality and reliability. Nevertheless, all electrical components are subject to natural deterioration, and durability of a product will depend on the operating environment and conditions of use. Continued use after such deterioration could lead to overheating, smoke or fire. Always use the product in conjunction with proper fire-prevention, safety and maintenance measures to avoid accidents, reduction in product life expectancy or break-down.
- 3) Before connecting, check the pin layout by referring to the connector wiring diagram, specifications diagram, etc., to verify that the connector is connected properly.  
Mistakes made in connection may cause unforeseen problems in operation, generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry.
- 4) Do not use any motion sensor which has been disassembled or remodeled.
- 5) Failure modes of sensors include short-circuiting, open-circuiting and temperature rises. If this sensor is to be used in equipment where safety is a prime consideration, examine the possible effects of these failures on the equipment concerned, and ensure safety by providing protection circuits or protection devices.  
Example :
  - Safety equipments and devices
  - Traffic signals
  - Burglar and disaster prevention

| Title                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | REFERENCE SPECIFICATION                                                                                                        | Page 7 / 10             |

| <p>6-3 Handling Cautions</p> <ol style="list-style-type: none"> <li>1) Do not solder with a soldering iron above 350°C (662°F), or for more than 3 seconds.<br/>This sensor should be hand soldered.</li> <li>2) To maintain stability of the product, always mount on a printed circuit board.</li> <li>3) Do not use liquids to wash the sensor. If washing fluid gets through the lens, it can reduce performance.</li> <li>4) Do not use a sensor after it fell on the ground.</li> <li>5) The sensor may be damaged by ±200 volts of static electricity. Avoid direct hand contact with the pins and be very careful when operating the product.</li> <li>6) When wiring the product, always use shielded cables and minimize the wiring length to prevent noise disturbances.</li> <li>7) The inner circuit board could be destroyed by a voltage surge. Use of surge absorption elements is highly recommended.<br/>Surge resistance : below the power supply voltage value indicated in the maximum rated values section.</li> <li>8) Please use a stabilized power supply. Power supply noise can cause operating errors.<br/>Noise resistance : ±20V or less (Square waves with a width of 50ns or 1μs)<br/>To reduce the effect of power supply noise, install a capacitor on the sensor's power supply pin.</li> <li>9) Operating errors can be caused by noise from static electricity, lightning, cell phone, amateur radio, broadcasting offices etc...</li> <li>10) Detection performance can be reduced by dirt on the lens, please be careful.</li> <li>11) The lens is made of soft materials (Polyethylene). Please avoid adding weight or impacts that might change its shape, causing operating errors or reduced performance.</li> <li>12) Operating "temperatures" and "humidity level" are suggested to prolong usage. However, they do not guarantee durability or environmental resistance. Generally, high temperatures or high humidity levels will accelerate the deterioration of electrical components. Please consider both the planned usage and environment to determine the expected reliability and length of life of the product.</li> <li>13) Do not attempt to clean this product with any detergent or solvent, such as benzene or alcohol, as these can cause shape or color alterations.</li> <li>14) Avoid storage in high, low temperature or liquid environments. As well, avoid storage in environments containing corrosive gas, dust, salty air etc. It could cause performance deterioration and the sensor's main part or the metallic connectors could be damaged.</li> <li>15) Storage conditions<br/> Temperature: +5 ~ +40°C (+41 ~ +104°F)<br/> Humidity: 30 ~ 75%<br/> Please use within 1 year after products delivery.</li> </ol> |                                                                                                                                |                     |

### 7. When Designing Your Product

To maintain specified detection capability, please place and expose the sensor so that tip of lens will be more than 5.1mm above the chassis.

The hole of the chassis should have a taper depending on the lens shape, or have a bigger hole.

Recommended Hole Drilling Diameter
