

Specialist Distributor of Interconnect & Passive Electronic
Components, Discrete Semiconductors, &
Electro-Mechanical Devices

TTI Sales Compliance to ISO-9001, ISO-14001 and AS9100

Many of our customers have systems which list the local branch sales office as their supplier and have requested to see Quality System and/or Environmental certifications of the sales branches that represent TTI, Inc. The Quality Management System (QMS) and Environmental Management System (EMS) were developed by the corporate location in Fort Worth, Texas with the appropriate procedures used in the sales branches being certified under the above applicable standards. The sales branches are simply an extension of the corporate location warehouse and assembly operations which holds certification to ISO-9001, ISO-14001 and AS9100. Although each sales branch is not certified independently, they do meet the intent of the standard by utilizing the applicable procedures written and controlled via our corporate location. Sales branches DO NOT handle, store or modify product in any way. They are located in strategic locations to provide engineering, technical and customer service to our customer base. All quotations, purchase orders, technical specification and any other pertinent information are flowed-down to the manufacturers (as applicable) through our corporate offices. Suppliers for products that TTI represents are controlled and maintained electronically in the approved supplier listing (ASL) through the systems controlled at the corporate location.

As such, the TTI Sales branches are strictly sales offices with all distribution done from Fort Worth, Texas with additional certified distribution centers in Europe and Asia. As TTI also services the military and aerospace markets, our system is certified to not only ISO-9001 (North America, Europe and Asia) but also AS9120 (Europe), AS9100 (North America & Europe) and ISO-14001 globally. All procedures for all locations (Sales Offices and Distribution centers) are controlled from our corporate offices in Fort Worth, Texas.
