Type of Change	Product Change
-----------------------	----------------

Description of Change	<p>The increased capacity and/or new tooling allows us to manage demand fluctuations, increase productivity, and meet Yazaki's requirements on time.</p> <p>This change enables us to expand our manufacturing capacity by moving part of the OCS program to the new 1152 and 1142 assembly machines.</p> <p>These machines offer greater process stability, increased efficiency, and more robust controls compared to our current equipment.</p> <p>The increased automation capacity allows us to respond more effectively to demand fluctuations, improve throughput, and ensure consistent production, meeting customer delivery expectations.</p> <p>Since the assembly sequence and product features remain unchanged, this modification does not affect the quality of the final product.</p>
